

LYSOZYME TRANSGENIC UNGULATES

ABSTRACT OF THE DISCLOSURE

[00109] The present invention provides transgenic ungulates that include a transgene that encodes lysozyme, and further has an attenuated or non-functional β -lactoglobulin allele. The invention further provides methods for producing such animals. The invention further provides methods of producing a food product, such as milk, or a milk product, using a subject transgenic ungulate, as well as food products harvested from a subject transgenic ungulate.
